

Vanguard Instruments Company, Inc.

IRM-5000P

The IRM-5000P is a microprocessor-based, high-voltage, insulation-test ohmmeter. The rugged and portable IRM-5000P is ideal for use in electric utility substations and for industrial applications.

This sophisticated insulation tester uses a dual-microprocessor design. One microprocessor is dedicated to the control of the power supply and measuring circuitry, while the second is dedicated to the user interfaces and printer control. To ensure operator safety, the microprocessors communicate via an optical link, thus isolating the operator controls from the dangerous high test voltages inside the unit.

The IRM-5000P has been in production since 2003, and over 250 units have been sold world-wide.
